AMENDMENTS TO THE CLAIMS

The listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (previously presented) A computer implemented method to provide a home page identifier to a client computing device, the method comprising:

receiving, over a computer network, at a redirection web site, a home page request from the client computing device, the home page request including a user identifier that identifies a user of the client device, wherein the redirection web site performs the steps including:

obtaining a timestamp identifying a current time and a current day;

obtaining one or more network connection identifiers that identify one or more computer networks to which the client computing device is connected from the home page request;

retrieving, from a nonvolatile storage device, the home page identifier , wherein the retrieving further comprises:

selecting, from the nonvolatile storage device, one or more records that correspond to the user identifier, wherein the nonvolatile storage device includes records for a plurality of user identifiers; and

identifying, from the group of selected records, the home page identifier based upon the

obtained timestamp and the obtained network
connection identifiers; and

setting a browser's home page to the retrieved home
page identifier, wherein the setting of the
browser's home page includes redirecting the
browser executing on the client computing device
to the retrieved home page identifier.

2. (canceled)

3. (canceled)

4. (canceled)

5. (previously presented) The computer implemented method of
claim 1 wherein the obtaining of the timestamp includes
retrieving a current timestamp from the home page request,
wherein the current timestamp corresponds to the current
time and the current day at the client computing device.

6. (canceled)

7. (canceled)

8. (previously presented) An information handling system to
provide a home page identifier to a client computing
device, the information handling system comprising:

one or more processors;

a memory accessible by the processors;

a nonvolatile storage device;

one or more network adapters connecting the information
handling system to one or more computer networks; and

an home page selection tool for selecting the home page,
the home page selection tool including a plurality of
instructions stored in the memory and executed by at
least one of the processors to perform actions
comprising:

receiving, at one of the network adapters over the
computer network, a home page request from the
client computing device, the home page request
including a user identifier that identifies a
user of the client device, wherein the
information handling system is a redirection web
server that performs the steps including:

obtaining a timestamp identifying a current time
and a current day;

obtaining one or more network connection
identifiers that identify one or more
computer networks to which the client
computing device is connected from the home
page request;

retrieving, from the nonvolatile storage device,
a home page identifier , wherein the
retrieving further comprises:

selecting, from the nonvolatile storage
device, one or more records that
correspond to the user identifier,
wherein the nonvolatile storage device
includes records for a plurality of
user identifiers; and

identifying, from the group of selected records,
the home page identifier based upon the

obtained timestamp and the obtained network
connection identifiers; and

setting a browser's home page to the retrieved
home page identifier, wherein the setting of
the browser's home page includes redirecting
the browser executing on the client
computing device to the retrieved home page
identifier.

9.   (canceled)

10.   (canceled)

11.   (canceled)

12.   (previously presented) The information handling system
of claim 8 wherein the step of obtaining the timestamp
includes a step of retrieving a current timestamp from the
home page request, wherein the current timestamp
corresponds to the current time and the current day at the
client computing device.

13.   (canceled)

14.   (currently amended) A computer program product stored
on a computer readable medium comprising computer
instructions that, when executed by an information handling
system, cause the information handling system to perform
actions to provide a home page identifier to a client
computing device, the actions ~~method~~ comprising:

receiving, over a computer network, at the information
handling system that is a redirection web server, a

home page request from the client computing device,
the home page request including a user identifier that
identifies a user of the client device, wherein the
redirection web site performs the steps including:

obtaining a timestamp identifying a current time and a
current day;

obtaining one or more network connection identifiers that
identify one or more computer networks to which the
client computing device is connected from the home
page request;

retrieving, from a nonvolatile storage device, the home
page identifier , wherein the retrieving further
comprises:

selecting, from the nonvolatile storage device, one or
more records that correspond to the user
identifier, wherein the nonvolatile storage
device includes records for a plurality of user
identifiers; and

identifying, from the group of selected records, the
home page identifier based upon the obtained
timestamp and the obtained network connection
identifiers; and

setting a browser's home page to the retrieved home page
identifier, wherein the setting of the browser's home
page includes redirecting the browser executing on the
client computing device to the retrieved home page
identifier.

15.   (canceled)

16.   (canceled)

17.   (canceled)

18.   (previously presented) The computer program product of
   claim 14 wherein the action of obtaining the timestamp
   includes an action of retrieving a current timestamp from
   the home page request, wherein the current timestamp
   corresponds to the current time and the current day at the
   client computing device.

19.   (canceled)

20.   (canceled)

21.   (new) The computer implemented method of claim 1
   wherein the one or more records that correspond to the user
   are arranged in a home page table that corresponds to the
   user, and wherein the retrieving further comprises:
       accessing the home page table that corresponds to the user
       identifier, wherein the home page table includes a
       plurality of entries, and wherein each entry includes
       a network identifier field, a day of the week field, a
       time range field, and an address field;
   selecting one of the entries by matching the obtained
       timestamp with the day of the week field and the time
       range field and by matching the obtained one or more
       network connection identifiers with the network
       identifier field; and
   acquiring the identified home page identifier from the
       address field of the selected entry.

22.   (new) The information handling system of claim 8
wherein the one or more records that correspond to the user
are arranged in a home page table that corresponds to the
user, and wherein the actions that perform the retrieving
further comprise:

accessing the home page table that corresponds to the user
    identifier, wherein the home page table includes a
    plurality of entries, and wherein each entry includes
    a network identifier field, a day of the week field, a
    time range field, and an address field;

selecting one of the entries by matching the obtained
    timestamp with the day of the week field and the time
    range field and by matching the obtained one or more
    network connection identifiers with the network
    identifier field; and

acquiring the identified home page identifier from the
    address field of the selected entry.

23.   (new) The computer program product of claim 14 wherein
the one or more records that correspond to the user are
arranged in a home page table that corresponds to the user,
and wherein the actions that perform the retrieving further
comprise:

accessing the home page table that corresponds to the user
    identifier, wherein the home page table includes a
    plurality of entries, and wherein each entry includes
    a network identifier field, a day of the week field, a
    time range field, and an address field;

selecting one of the entries by matching the obtained
    timestamp with the day of the week field and the time

range field and by matching the obtained one or more
network connection identifiers with the network
identifier field; and

acquiring the identified home page identifier from the
address field of the selected entry.
